**Amendments to the Claims:**

This listing of claims will replace all prior versions, and listings, of claims in the application:

**Listing of Claims:**

1.-16. (Canceled)

17. (Previously Presented) A catheter for use in forming a unidirectional valve in a vein, the catheter comprising:

a catheter shaft;

at least two expandable balloons positioned on the catheter shaft;

an expandable support member, the expandable support member being disposed about one of the balloons in a reduced state, the expandable support member being expandable from the reduced state to an expanded state; and

an expandable saddle member, the expandable saddle member including a first biasing region, a second biasing region and at least one end region, the expandable saddle member having a reduced state, a partially expanded state and a fully expanded state, where in the reduced state for the expandable saddle member the first biasing region, the second biasing region and at least one end region are engaged to the catheter shaft, in the partially expanded state the first biasing region and the second biasing region are free to expand radially outward from the catheter shaft but the at least one end region remains engaged to the catheter shaft, and in the fully expanded state the first biasing region, the second biasing region and the at least one end region are all free to expand radially outward from the catheter shaft.

18. (Canceled)

Application No. 10/692,401  
Amendment dated January 9, 2008  
Reply to Final Office Action of October 9, 2007

19. (Original) The catheter of claim 17, wherein the catheter shaft defines an evacuation port and an evacuation lumen in fluid communication therewith, the evacuation port being positioned between the at least two expandable balloons.
20. (Original) The catheter of claim 17, wherein the catheter further includes an injection device extending along the catheter shaft and is constructed and arranged to be advance through a vein wall to deposit injection material about a selected portion of the vein.
21. (Previously Presented) The catheter of claim 20, wherein the injection material is selected from at least one member of the group consisting of: saline, contrast medium, anesthetic solution, air, carbon dioxide, and any combination thereof.
22. (Original) The catheter of claim 17, wherein the expanded support member includes a stent.
23. (Original) The catheter of claim 17, further including a helical member disposed within a lumen of the catheter shaft, wherein the helical member deploys from the lumen and limits the expansion of the expandable support member.
